

OCEAN SCIENCE MATTERS

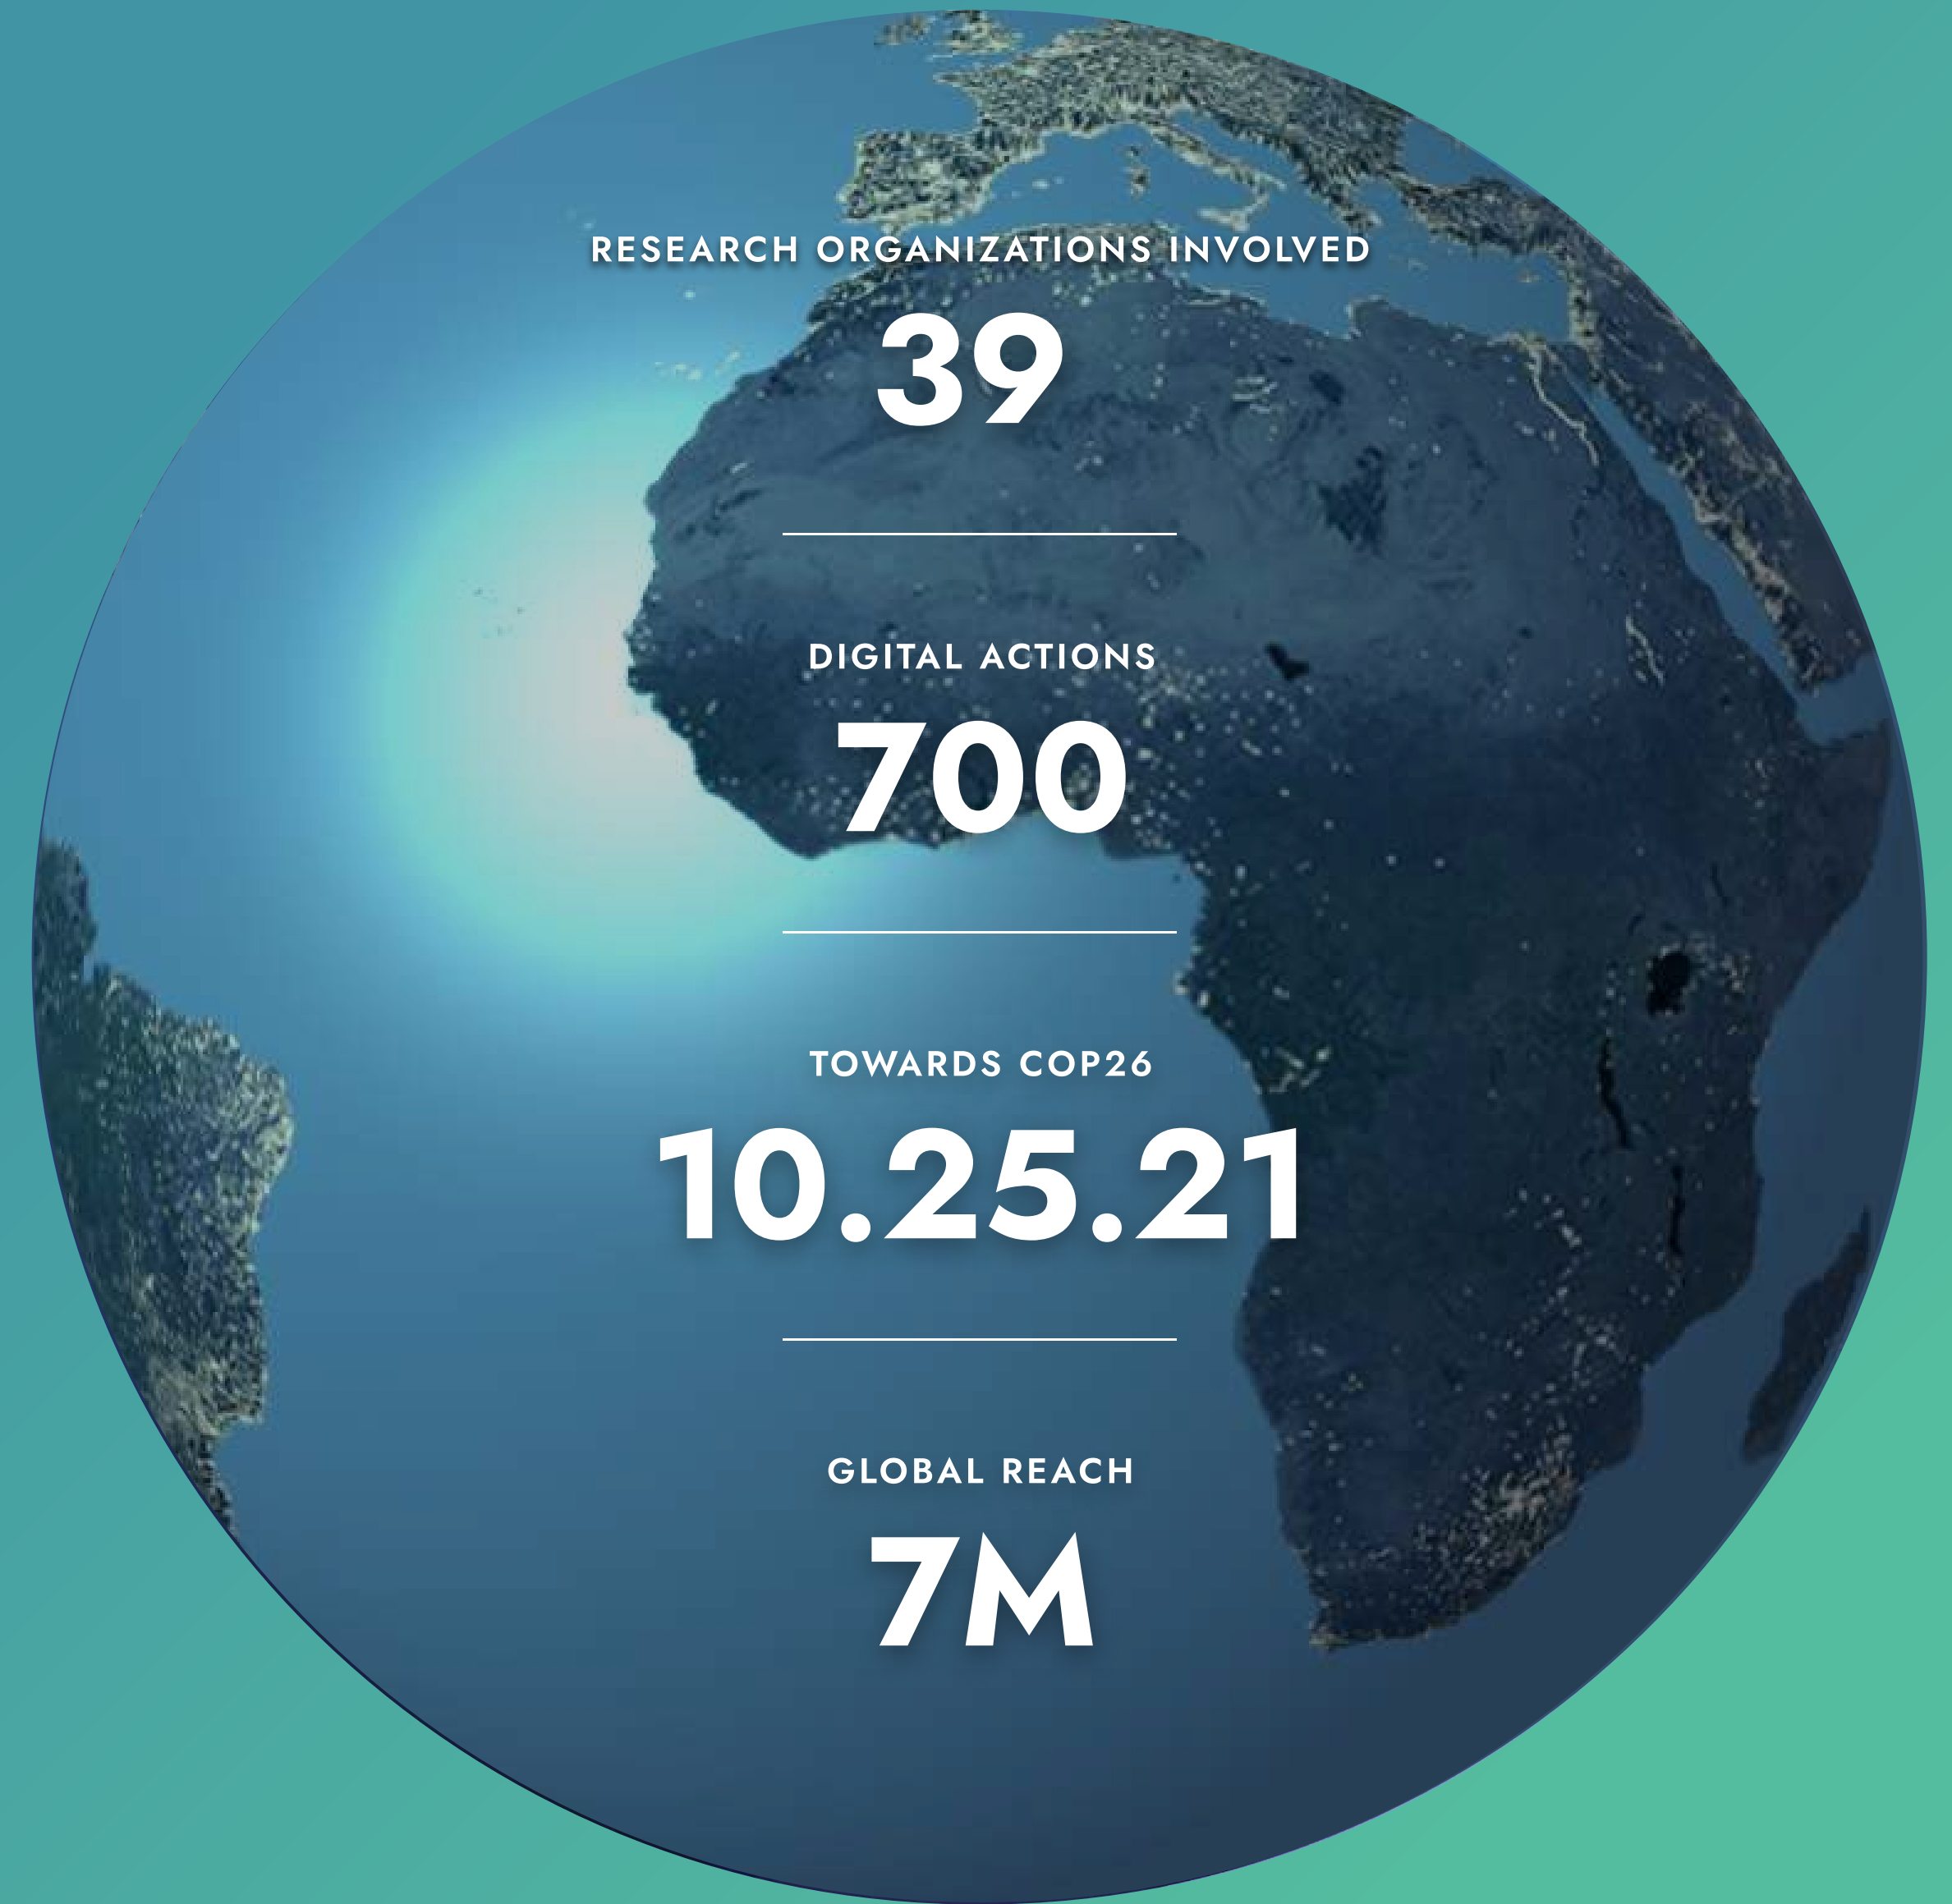

All over the world, scientists are working together to increase our understanding of the Ocean with the ambition to narrow the gap between knowledge, decision-making and action.

OneOceanScience is a digital world tour covering ocean and climate science on the Seven Seas with an immersive landing page and a series of short videos posted on our social media channels as a continuum.

We call upon the international science community to promote access to scientific knowledge to fight the climate crisis and remind the world that ocean science is key to predict and address its impacts.

Launched on October 25th 2021, OneOceanScience will also be showcased at COP26, and **Thomas Pesquet**, ESA astronaut onboard the International Space Station, will share his view on the Ocean from Space, telling us *why ocean science matters*.
